Office Action Summary

DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-22 and 28-39, drawn to an encoding system, classified in class 382, subclass 239.
 - II. Claims 23-27, drawn to “a basic state context region data structure representing only previously encoded pixels that are immediately adjacent to the selected pixel” corresponding to an image selection, classified in class 358, subclass 453.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the Invention I as claimed does not set forth the details of the Invention II as separately claimed. The Invention II has separate utility such as “a basic state context region data structure representing only previously encoded pixels that are immediately adjacent to the selected pixel”.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and required the different field of search for each of these inventions, restriction for examination purposes as indicated is proper.

Art Unit: 2621

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
